

Candidate

Summary

AI-focused engineering candidate targeting Ai Intern at Amazon. Demonstrated hands-on delivery in model pipelines, LLM security, and production Python APIs.

Skills

- Ci/Cd
- Docker
- Fastapi
- Python
- Pytorch
- Rag
- Sql
- Tensorflow

Projects

- Built AutoML pipeline for model selection and deployment; reduced model-to-production cycle by 70% across 5+ datasets.
- Implemented LLM jailbreak defense layer with 92%+ detection accuracy over 10+ prompt attack classes.
- Developed RAG-based cognitive assistant with persistent memory and vector retrieval for long-context sessions.

Experience Highlights

- Designed Python/FastAPI model-serving APIs with SQL-backed feature persistence and low-latency inference.
- Optimized ML training/evaluation pipelines (Pandas, Scikit-learn, XGBoost, LightGBM) to cut iteration time by 50%.
- Improved deployment reliability using Dockerized services and CI/CD checks for reproducible model releases.
