Summary

Highly motivated AI/ML Engineer and Full-Stack Developer with hands-on experience building end-to-end ML pipelines, production REST APIs, and real-time distributed systems. Proficient in Python and applied expertise in advanced frameworks including PyTorch, TensorFlow, and XGBoost. Proven ability to translate complex natural language goals into deployed, functional AI solutions. Seeking an ML/Software Engineering Internship.

Technical Skills

```
[leftmargin=*, itemsep=2pt, parsep=0pt]
```

- AI/ML Frameworks: PyTorch, TensorFlow, Scikit-learn, XGBoost, LightGBM, NLP, RAG, Feature Engineering, Hyperparameter Tuning.
- Languages & Backend: Python (Expert), JavaScript (ES6+), Java, FastAPI, Node.js, REST APIs, SQL, Pandas, NumPy.
- Web & Infrastructure: React, Microservices, Docker, Kubernetes, AWS, CI/CD, WebRTC, Event-Driven Architecture.
- Databases & Tools: MongoDB, MySQL, Vector Databases (Pinecone/Chroma), Git, Jupyter.

```

```

Experience

AI & Backend Engineering Intern | Analytix4t Lab Pvt Ltd | Oct 2025 ? Dec 2025

```
[leftmargin=*, itemsep=1pt]
```

- Designed and deployed 10+ production REST APIs using Node.js, optimizing response latency via connection pooling and advanced query optimization.
- Integrated distributed microservices architecture, enabling low-latency, real-time enterprise data processing across concurrent multitenant workloads.
- Developed robust backend systems utilizing SQL and Python for data ingestion and transformation pipelines.

AI / ML Engineering Intern | ANNAM.AI (IIT Ropar) | May 2025 ? Jul 2025

```
[leftmargin=*, itemsep=1pt]
```

- Built end-to-end ML pipelines (preprocessing, feature engineering, training, evaluation) in Python and Pandas, cutting model iteration time by 50%.
- Trained and optimized XGBoost and LightGBM gradient boosting models for agricultural intelligence, achieving 87%+ prediction accuracy on crop yield forecasting datasets.
- Implemented model versioning and deployment strategies, ensuring reproducibility and scalability of ML assets.
