 Summary  
 Highly motivated B.Tech CS (AI) student with hands-on experience building end-to-end ML pipelines, production REST APIs, and real-time distributed systems. Proficient in Python and applied expertise in advanced frameworks including PyTorch, TensorFlow, XGBoost, and FastAPI. Proven ability to translate complex natural language goals into deployed AI solutions (RAG, LLMs). Open-source ecosystem founder and competitive problem solver (90+ LeetCode problems solved). Seeking ML/Software Engineering internships.  
 Technical Skills  
 - Languages: Python (Expert), Java, JavaScript (ES6+), SQL, Bash  
 - ML Frameworks: PyTorch, TensorFlow, Scikit-learn, XGBoost, LightGBM, Pandas, NumPy  
 - AI/ML Concepts: Retrieval-Augmented Generation (RAG), NLP, Prompt Engineering, Feature Engineering, Hyperparameter Tuning, AutoML, LLMs  
 - Backend/Web: FastAPI, REST APIs, Node.js, Microservices, WebRTC, API Architecture  
 - Databases/Tools: Vector Databases (Pinecone/Chroma), MongoDB, MySQL, Docker, AWS, Git, CI/CD  
 - CS Fundamentals: Data Structures, Algorithms, OOP, Distributed Systems, System Design, Event-Driven Architecture  
 Experience  
 AI & Backend Engineering Intern | Analytix4t Lab Pvt Ltd | Oct 2025 ? Dec 2025  
 - Designed and deployed 10+ production REST APIs using Node.js, optimizing response latency via connection pooling and advanced query optimization for a financial analytics platform.  
 - Integrated distributed microservices architecture, enabling low-latency, real-time enterprise data processing across concurrent multitenant workloads.  
 AI / ML Engineering Intern | ANNAM.AI (IIT Ropar) | May 2025 ? Jul 2025  
 - Built end-to-end ML pipelines (preprocessing, feature engineering, training, evaluation) in Python, Pandas, and Scikit-learn, resulting in a 50% reduction in model iteration time.  
 - Trained and optimized XGBoost and LightGBM gradient boosting models for agricultural intelligence systems, achieving 87%+ prediction accuracy on crop yield forecasting datasets.  
 Selected Projects & Research  
 KAI ? Cognitive AI Companion Research Paper In Progress  
 - Developed an AI assistant featuring persistent memory and emotional state simulation by implementing a novel RAG architecture utilizing vector databases for long-term context retention across sessions.  
 AutoML Pipeline Natural Language to Deployed Model  
 - Engineered an AutoML system that converts natural language goals into deployed models, cutting model-to-production time by 70%. Benchmarked RF, XGBoost, and LightGBM across 5+ datasets using Bayesian hyperparameter tuning.  
 AI Jailbreak Defense System Patent & Research In Progress
